SUMMARY

Full-Stack Software Engineer with **nearly 3 years of experience** building **scalable, cloud-native** applications and **high-performance** enterprise-level distributed systems. Currently engineering real-time billing architectures and billing platforms at Oracle. Proven expertise across the full **development life-cycle**, combining **robust backend** engineering with the creation of responsive, **high-performance UI**. Backed by a strong foundation in Data Structures and Algorithms with a proven track record in competitive programming and real-world problem-solving

EXPERIENCE

Oracle

Software Developer

Aug 2023 – Present
Bangalore, Karnataka

- Delivered a highly scalable Kafka publication pipeline establishing a **horizontally scalable Event-Driven Architecture**, which translates rated events into TMF 635 standards, utilizing Helm toggles to decouple legacy paths and **reduce legacy database load by 35%**.
 - Worked with the team on integrating a Network Bridge, facilitating 4G/5G protocol conversion, into the legacy monolith, handling upwards of **10,000 requests per second with <5ms latency overhead**, decoupling the billing logic from evolving network interfaces.
 - Architected configurable threshold-breach notification workflows, **reducing Kafka message redundancy by 27%**, and redesigned secure wallet mounting mechanisms to **accelerate deployment pipelines by 25%** with backward compatibility.
 - Modernized a legacy billing dashboard by rebuilding it in Next.js, **improving perceived load time by 14%**, increasing user task completion by 20%, and **lowering maintenance complexity** through a modular component-based architecture.
 - Developed scalable RESTful APIs and reusable UI components to enable single-click processing of diverse payment file formats, reducing manual **processing time by 95%**, while leveraging Oracle Coherence distributed caching for low-latency real-time charging records
 - Resolved **100+ production incidents** (including 39 high-priority cases), trimming the **backlog by 31%** and maintaining high availability.
- Tech Stack — Java, JavaScript, Spring, Helidon, React.js, Next.js, Kafka, Groovy, Spock, Cucumber, Kubernetes*

Oracle

Software Developer Intern

Jan 2023 – Jul 2023
Bangalore, Karnataka

- Drove the **Java 8-to-21 migration** strategy within the intern team, resolving dependency conflicts to clear **100% of critical CVEs**; made a **custom build utility** that simplified Maven commands, accelerating development cycles and cutting **build time by 20%**.
 - Added **unit test** for a newly decoupled microservice using Groovy and Spock, boosting code coverage from **56% to 92%**.
 - Conducted hybrid deployments (**On-Prem & Kubernetes**) using Helm charts for the high-volume processor service, validating system stability under peak loads to **ensure less than 50ms latency** at scale.
- Tech Stack: Java, Helidon, Helm, Kubernetes, Groovy, Spock*

Microsoft

Software Engineer Intern

May 2022 – Jul 2022
Noida, Uttar Pradesh

- Contributed to Microsoft Loop's real-time collaboration features, **reducing latency by 25% and restoring text-editor performance**.
 - Added custom schema support for the **people picker** component, **reducing overhead by 35%**.
 - Restored 100% text-editing features** after removal of the collaborative text editor, removing dependency-related regressions.
- Tech Stack: Typescript, React.js*

SKILLS

- Programming Languages:** C/C++, Java, JavaScript, TypeScript, Groovy, Python, HTML, CSS
- Frameworks & Libraries:** Spring, React, Spring Boot, Next.js, Helidon, Bootstrap, Tailwind
- Tools:** Git, GitHub, GitLab, Docker, Kubernetes, Helm, Firebase, Spock, Cucumber
- Areas of Strength:** UI/UX implementation, API integration, REST, Microservices, Cloud deployments, CI/CD
- Relevant Coursework:** Data Structures and Algorithms, Operating Systems, Object Oriented Programming, Database Management System, Computer Networks

PROJECTS

Resonance 🌐 🌐 — *Next.js, Node.js, Express, MongoDB*

December 2022

- Created the full-stack MVP in 10 weeks: set up JWT auth, protected routes (React Context API), and backend middleware for request handling, auth flow, validation, and error handling; primary owner of front-end and middleware.
- Built RESTful APIs and data model for internship listings (15 API endpoints, 20+ React components); applied parameterized queries, server-side pagination, and MongoDB indexing to support efficient filtering and large result sets.

Lemonerd 🌐 🌐 — *Next.js, MongoDB, Firebase*

June 2021

- Migrated a manually-maintained HTML blog to Next.js (SSG/SSR) and provided content management APIs to automate author and blog page generation, eliminating manual admin page creation.
- Enabled backend interlinking and Firebase media handling to support 150+ posts with 99% content availability and zero downtime; owned API integration and data synchronization between Next.js and Firebase.

EDUCATION

Birla Institute of Technology, Mesra

B.Tech. in Information Technology

Aug 2019 – May 2023

GPA: 8.82

ACHIEVEMENTS

- Rated 1800+ and solved 700+** LeetCode problems. Global Rank 135 in CodeChef September Long Challenge (6k+ participants).
- Winner, Student Branch Associates Program (AISYWL'C'20) — IEEE Delhi Section and Winner, IEEE LEAD'20 web development contest.
- Led a **60+ member team as Vice-chairman** of IEEE (student body), managing events, budgets, workshops, and external collaborations
